

D (from banks short of reserves)

---

Federal Funds

$S_0$  (from banks  
with excess  
reserves)

**R**

The effect of a **sale** of bonds by the Fed on the  
Federal Funds Market

Feedseis Bonds:

A sale of bonds by the Fed  
eliminates reserves from the  
banking system

There will be fewer banks  
with Excess Reserves

The **Supply** of funds in this  
market decrease

A leftward shift in  
the Supply of funds

$\text{ffr}_e = 3\%$

$Q^s = Q^d$

Assume the  
market starts at  
equilibrium

$S_1$  (from banks  
with excess  
reserves)

$\text{ffr}_1 = 5\%$

A diagram consisting of a horizontal dashed line extending from the text  $\text{ffr}_1 = 5\%$  to a green dot. From this dot, a vertical dashed line extends downwards to the text  $Q^s = Q^d$ .

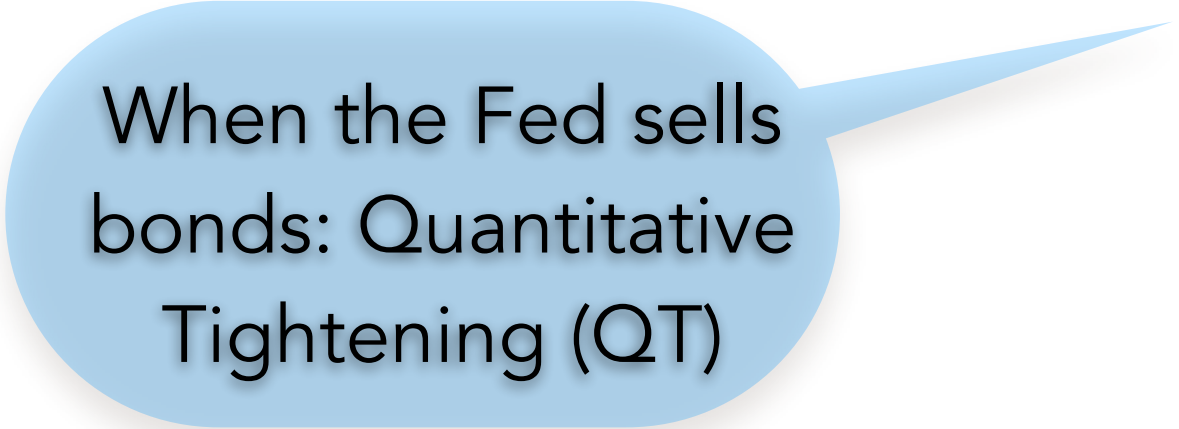

$Q^s = Q^d$

The Fed Funds  
Rate rise

Reserves

When the Fed sells  
bonds: Quantitative  
Tightening (QT)

Federal Funds Rate

ffr

# The effect of a **sale** of bonds by the Fed on the Federal Funds Market

When the Fed sells bonds: Quantitative Tightening (QT)

Fed **sells** Bonds: **Reserves** ↓

A **sale** of bonds by the Fed **eliminates** reserves from the banking system

There will be **fewer** banks with Excess Reserves

The **Supply** of funds in this market **decrease**
