S

A rightward shift in the Demand for
Money

Short of liquid
balances at 3%

When there are shortages of liquid
balances, money is scarce and
there is pressure for the interest
rate to rise

The interest rate will rise to

a new equilibrium at 5%

$$\dot{i}_0 = 5\%$$

New
equilibrium

I leave the effect of
a **Decrease** in the
Price level for you to
work as an exercise

The effect of an increase in the Price Level

If **prices increase** (inflation) the public will need **larger** liquid balances

The effect of an increase in the Price Level
