

# Okun's Law: an example

Assume the  $NRU = 5\%$   $GDP = 12$  Trillion

Actual Unemployment Rate = 9%

% Unemployment *above* NRU = 9 – 5 = 4%

Okun's Law: For each 1% extra unemployment we lose 2.5% of GDP

$$\% \text{ Lost GDP} = 4(2.5) = 10\%$$

$$\text{Lost GDP} = 12\text{T} (0.10) = \$1.2\text{T}$$

\$1.2T worth of goods and services that can never be recovered

# Okun's Law: an example

Assume the NRU = 5%      GDP = 12 Trillion

Actual Unemployment Rate = 9%

% Unemployment **above** NRU =  $9 - 5 = 4\%$

Okun's Law: For each **1%** extra unemployment we lose **2.5%** of GDP

% Lost GDP =  $4(2.5) = 10\%$

**Lost** GDP =  $12T (0.10) = \$1.2T$

**\$1.2T** worth of goods and services that can **never** be recovered

America has seen an explosion in violence since the start of the covid-19 pandemic.
