

We will use the following values for this example:

C = 100 + 0.9Y

**G** = 500 billion

**1** = 1,000,000 billion

M = 500 billion

**x** = 800 billion

**NXX** = **800** - **500** = **300**

# The Components of Aggregate Expenditures

# The Components of Aggregate Expenditures

We will use the following values for this example:

$$C = 100 + 0.9Y$$

$$G = 500 \text{ billion}$$

$$I = 1,000 \text{ billion}$$

$$M = 500 \text{ billion}$$

$$X = 800 \text{ billion}$$

$$NX = 800 - 500 = 300$$
