$P_0$

If the quantity that reaches the market is  $Q_0$ , each member gets this price per unit sold:  $P_0$

**P**

U

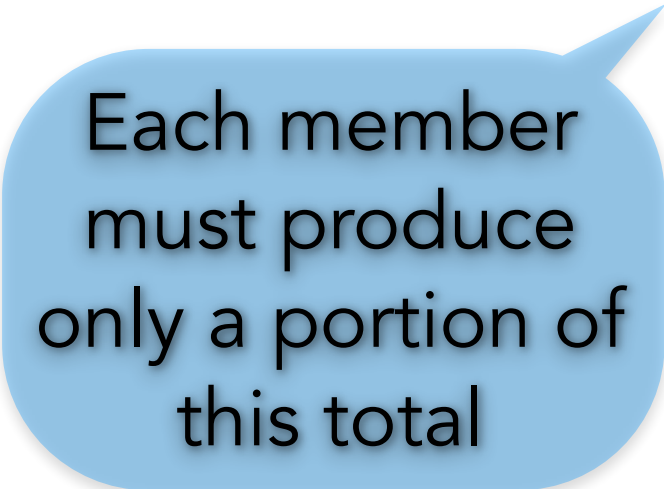

**/MR**

Each member  
must produce  
only a portion of  
this total

If any member produces  
**more** than its allotted  
quota, the quantity  
reaching the market would  
be higher than  $Q_0$

$P_1$

...and the price for  
ALL members will  
be lower than  $P_0$

OPEC does not  
have an effective  
enforcement  
mechanism except  
for occasional  
price wars...

Drug Cartels use  
violence as a very  
effective  
enforcement  
mechanism

# Price and Output Determination for a Cartel

# Price and Output Determination for the a Cartel

OPEC does not have an effective enforcement mechanism except for occasional price wars...
