

What happens
when new money
comes in?

The Federal Reserve
Bank **creates new money**

\$

\$

\$

Reserves increase by the amount of new
money injected:

In general, we can write the increase
in Reserves as:

$$\Delta R = 3,000 (1)$$

$\Delta R = \text{New Money}$

The Federal Reserve Bank creates new money

Reserves increase by the amount of new money injected:

In general, we can write the increase in Reserves as:

$$\Delta R = 3,000 (1)$$
