

# Federal Funds Rate

ffr

$S_1$

$S_0$

A leftward shift in the Supply of funds

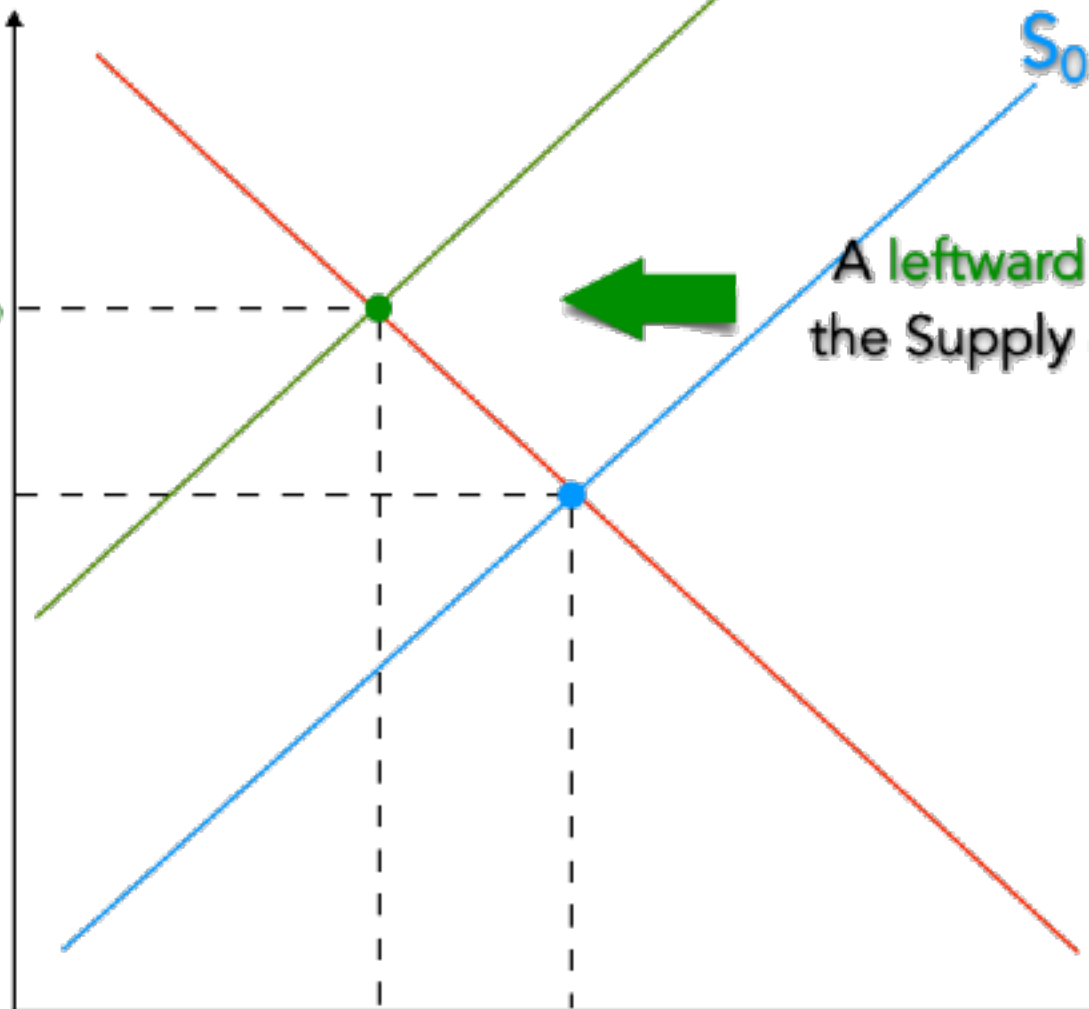

$ffr_1 = 5\%$

$ffr_e = 3\%$

The Fed Funds Rate rise

$Q^s = Q^d$   $Q^s = Q^d$

Federal Funds

Bond Price

There is an inverse relationship between the interest rate and the Price of the bond

$S_0$

$S_1$

A rightward shift in the Supply of bonds

$P_0$

$P_1$

Demand for bonds

As the bond price **fall**, the bond's interest rate **rise**

$Q_0^b$

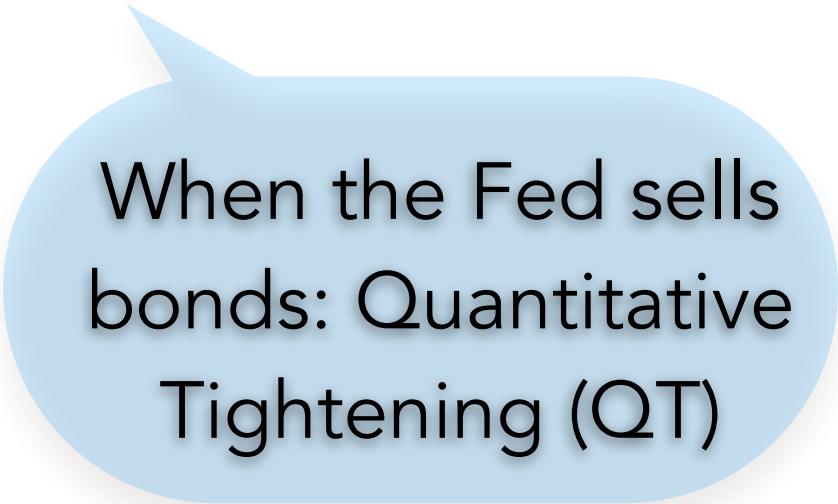

$Q_1^b$

Quantity of Bonds

Interest rates  
increase in all  
three markets

The effect of a Sale of bonds by the Fed

When the Fed sells  
bonds: Quantitative  
Tightening (QT)

# The Money Market

# The Federal Funds Market

The Bond Market

# The effect of a **Sale** of bonds by the Fed

## The Money Market

When the Fed sells bonds: Quantitative Tightening (QT)

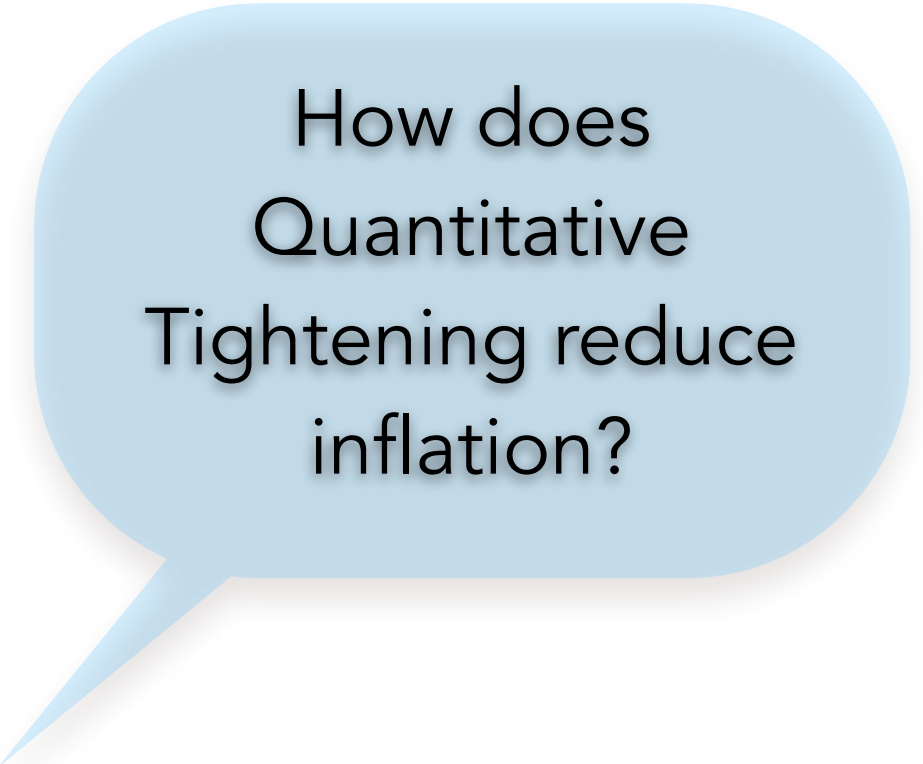

## The Federal Funds Market

## The Bond Market

Interest rates **increase** in all three markets

How does  
Quantitative  
Tightening reduce  
inflation?
