

Because items and quantities in the basket are
fixed, the CPI does not account for substitutions
consumers do in response to higher prices

Cause of this mistake: CPI uses **old** quantities with **new** price

We do not calculate the CPI correctly: Substitution Bias

Solution: Instead of updating the basket every 10 years we
now update the quantities in the basket every 2 years

We **do not** calculate the CPI correctly: **Substitution** Bias

Because items and quantities in the basket are **fixed**, the CPI **does not account for substitutions** consumers do in response to higher prices

Cause of this mistake: CPI uses **old** quantities with **new price**

Solution: Instead of updating the basket every 10 years we now update the quantities in the basket every 2 years

We **do not** use Chained CPI because the switch from Traditional CPI to Chained CPI must be **voted** on...
