		Prices
Basket	Quantity	Base Year
Food	10	10
Doctor Visit	2	50
Rent	1	700
Gasoline	50	2
Basket Cost	1,000	

Prices Today 30 500 2,000

Calculating the CPI

CPI_{today}

Cost of the Basket Today

x 100 Cost of the Basket Base

CPI_{today}

2.000

x 100

1,000

 $CPI_{today} = 200$

Basket today is two times more expensive than in the base year

The ONE number that represents today's prices of all goods and services in the market basket is 200

Calculating the CPI

$$CPI_{today} = \frac{Cost \text{ of the Basket Today}}{Cost \text{ of the Basket Base}} \times 100$$

		Prices	Prices
Basket	Quantity	Base Year	Today
Food	10	10	30
Doctor Visit	2	50	75
Rent	1	700	1500
Gasoline	50	2	1
Basket Cost		1,000	2,000

$$CPI_{today} = \frac{2,000}{1,000} \times 100$$

$$CPI_{today} = 200$$

The ONE number that represents today's prices of all goods and services in the market basket is 200

Basket today is two times more expensive than in the base year
