

Consumer Surplus at Equilibrium

 $CS = Base x Height x \frac{1}{2}$

 $CS = 250 \times (50-35) \times 1/2$

$$CS = 250 \times (15) \times \frac{1}{2} = $1,875$$

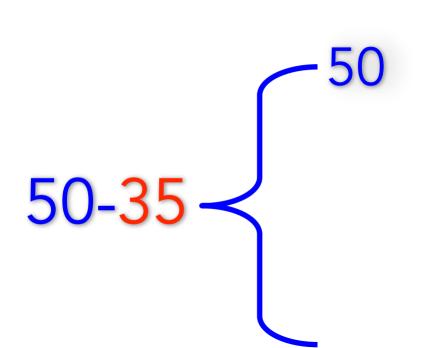

At Equilibrium consumers pay and producers receive the equilibrium price:

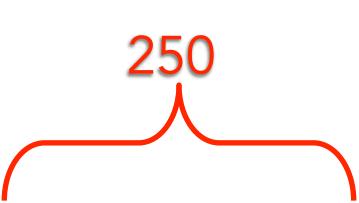

$$P_{e} = 35 - - - - -$$

$$P_e = 35$$

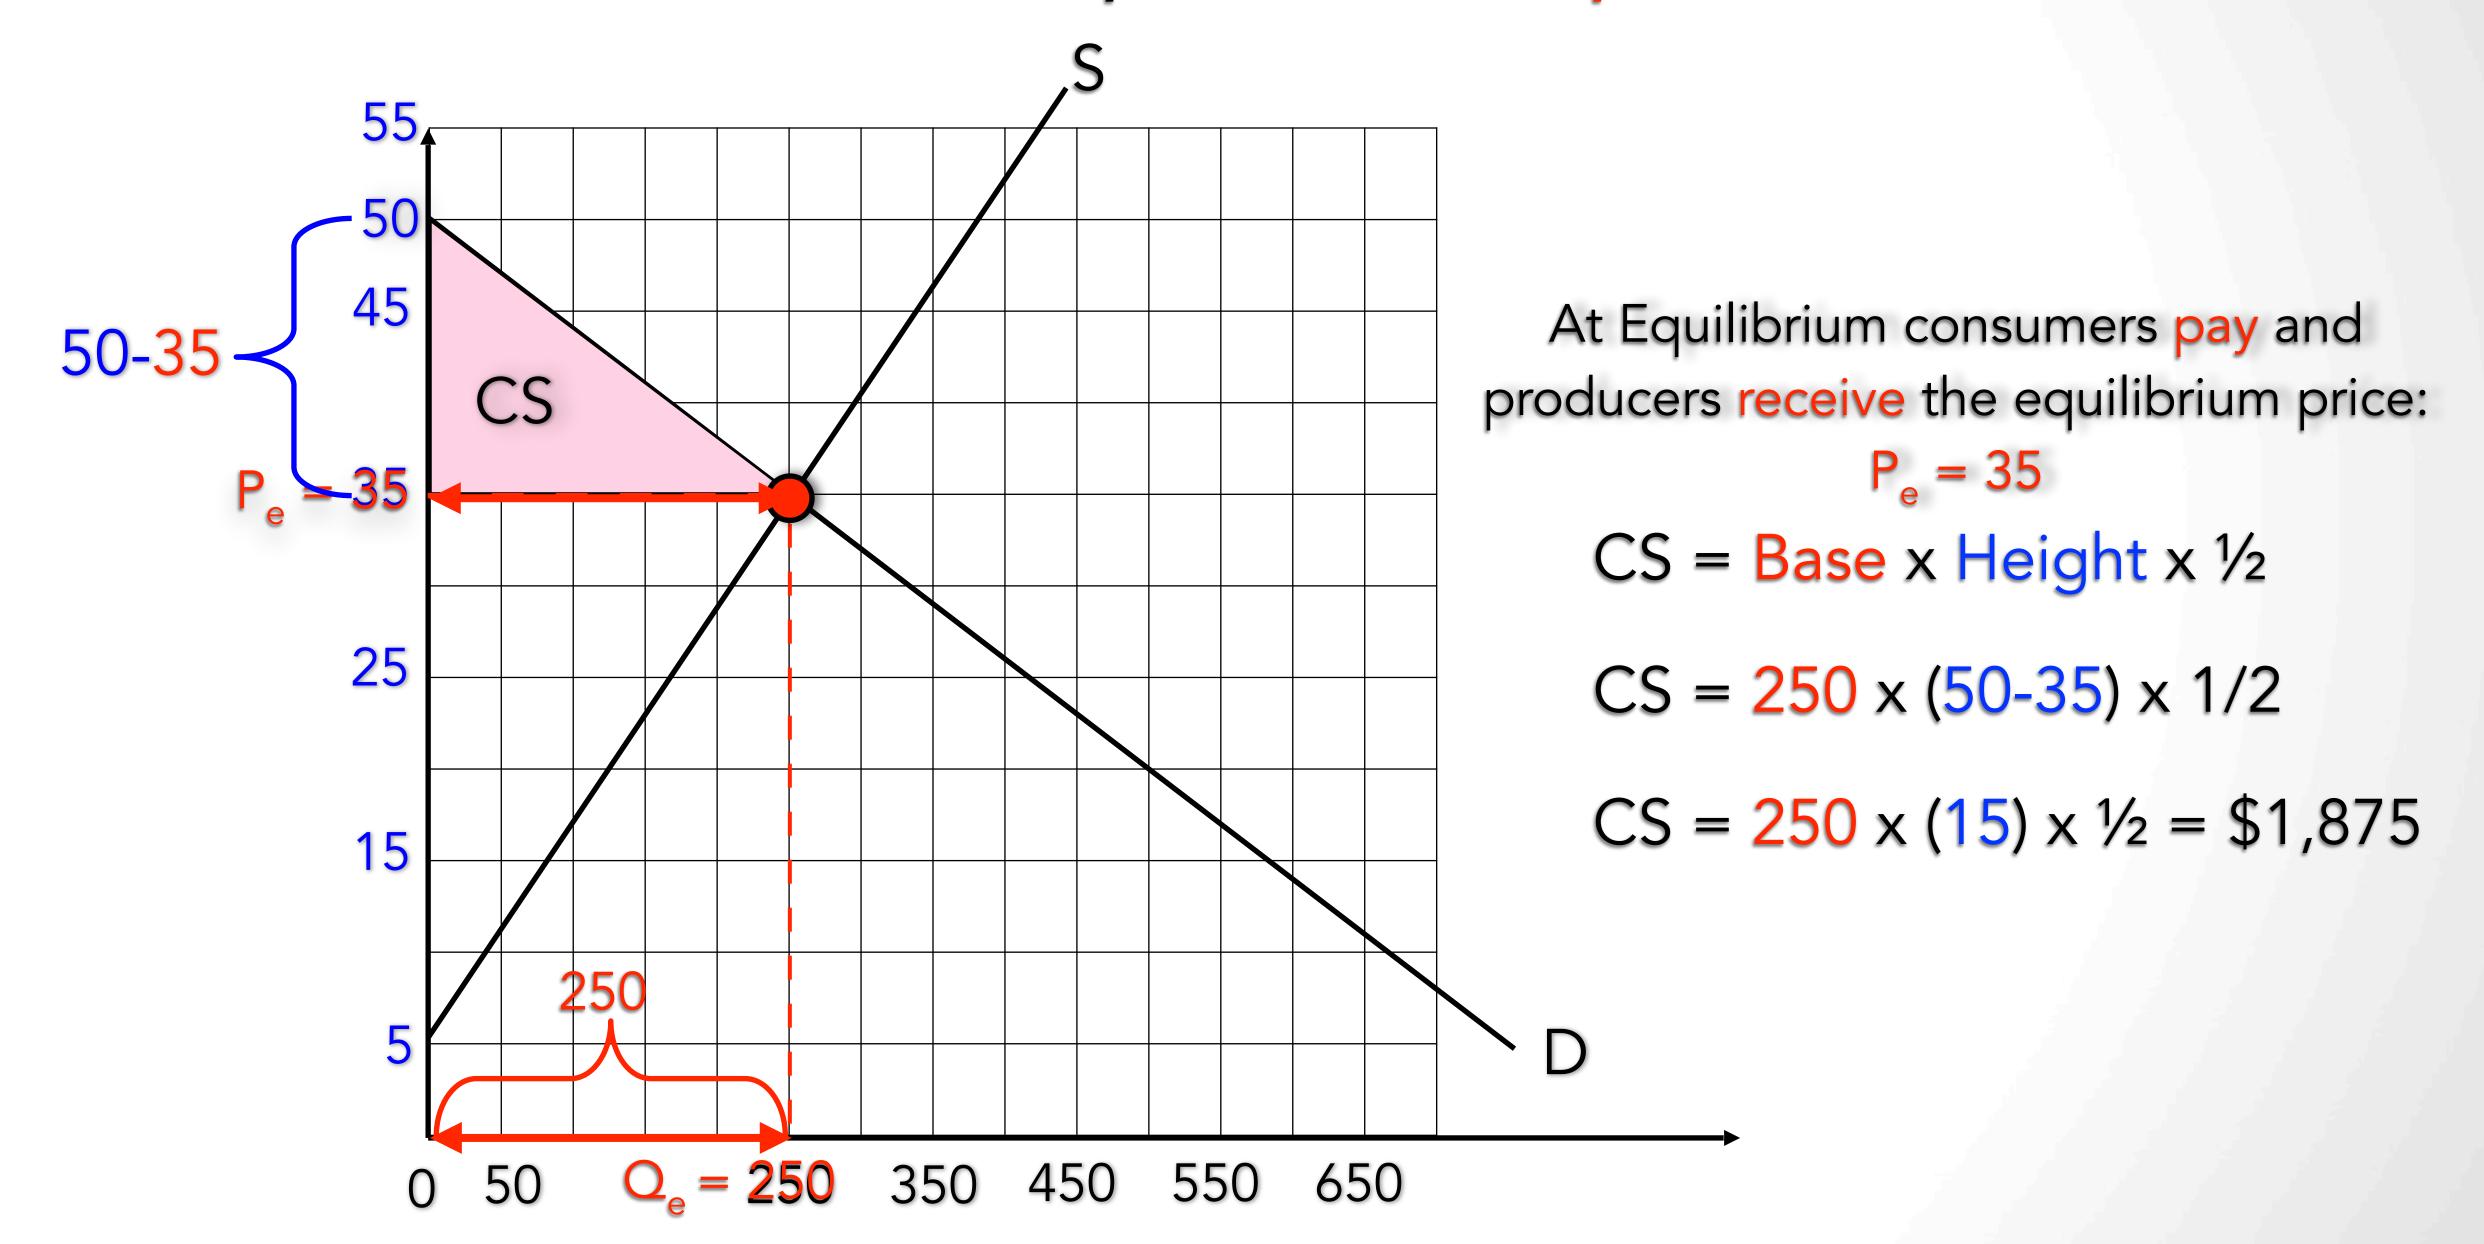

Consumer Surplus at Equilibrium

Producer Surplus at Equilibrium
