# Models of Oligopoly Behavior

No single general model of oligopoly behavior exists. These are models of oligopoly behavior:

## o The Cartel model: Firms agree to act as one

O Price Leadership model: One firm in the group (often the largest) makes pricing decisions and the rest "tacitly" follow.

 The Kinked Demand Model (for the special oligopoly case of Duopoly) Explains "price stickiness": the fact that oligopoly prices change less frequently than in perfectly competitive

markets

The contestable market model: The group behaves as PC market.

### Strategic Interaction: Game Theory

## Models of Oligopoly Behavior

No single general model of oligopoly behavior exists. These are models of oligopoly behavior:

#### Collusion:

- o The Cartel model: Firms agree to act as one
- Price Leadership model: One firm in the group (often the largest) makes pricing decisions and the rest "tacitly" follow.
- The Kinked Demand Model (for the special oligopoly case of Duopoly) Explains "price stickiness": the fact that oligopoly prices change less frequently than in perfectly competitive markets
- The contestable market model: The group behaves as PC market.
- Strategic Interaction: Game Theory

# The Cartel (Collusion) Model
